Serious road traffic injuries in Europe: Lessons from SafetyCube

Wendy Weijermars (SWOV)

Co-funded by the Horizon 2020 Framework Programme of the European Union
SafetyCube

- Aim: develop an innovative road safety Decision Support System (DSS): [https://www.roadsafety-dss.eu](https://www.roadsafety-dss.eu)
- Quantitative information on road safety risk factors and measures
SafetyCube – Serious road injuries

- Estimation of the number of MAIS3+ casualties
- Health impacts
- Costs related to serious road injuries
- Risk factors associated with serious road injuries

Serious injury = MAIS3+
Main lessons

1. One should be careful when comparing MAIS3+ figures from different countries
2. As AIS3+ injuries can have major impacts on casualties’ lives, pose a burden to society and result in considerable costs, it is important to reduce the number of MAIS3+ casualties
3. From a burden of injury perspective, less serious injuries are also relevant
Thank you!
